Daniel Enrique de Jesús Pelaez

FullStack Developer

+52-55-8733-8794 || danielenriquedejesus110693@gmail.com

I'm a computer systems engineer, self-taught and constantly learning, with an unwavering passion for new technologies. I have accumulated 4 years of professional experience in dynamic and multicultural companies. During this time, I have honed my skills in utilizing a variety of tools and frameworks, including React, Express, Scrum, and Redux.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services

FullStack Developer   *May 2022 - Present*

- Built and maintained user-friendly interfaces with React for financial web apps, ensuring smooth client interactions.
- Integrated APIs to connect front-end applications with back-end systems for real-time data handling.
- Created reusable components and managed complex forms, making the development process more efficient and scalable.
- Focused on testing with tools like Jest to ensure our financial apps were reliable and bug-free.

- I provided services to a client in the United States in the health insurance industry, I have extensive knowledge of React, including component-based development, state management, props, lifecycle methods, hooks (such as useState, useEffect, useContext), and functional components.
- Designed and configured CI/CD pipelines in GitHub Actions to automate deployments to Development (Dev), Quality Assurance (QA), and Production (Prod) environments.
- Implemented automated testing and code validation processes as part of the deployment pipelines.
- Deployed applications to production environments and conducted post-deployment validation to ensure smooth operations and identify potential issues.

AgileThought

FullStack Developer   *September 2020 - May 2022*

- I was responsible for developing customer requirements for a client in the financial services industry, creating new features, fixing bugs and unit testing application components (React, useContext, Cypress).
- Create new features and components, also optimize legacy code, keeping in mind the new standards in the software industry.
- Developed and maintained for a client in the United States in the retail industry using React components for the Spanish version of the application, focusing on UI/UX consistency and language accuracy (React, Redux, Enzyme).
- Collaborated with cross-functional teams to implement internationalization features, allowing for easy adaptation of the application to various languages.

EDUCATION

Computer Systems Engineer   **Instituto Tecnológico de Acapulco.**

SKILLS

- React, Typescript, Redux, React Hook Form, useContext, Axios, Javascript, HTML5, CSS3, SASS,
- Nodejs, Express, Java, Spring Boot, MongoDB, MySQL, React Testing Library, Jest, Cypress
- Agile Methodologies, Scrum, AWS, Git, Github, GitLab, Styled Components, Bootstrap, Tailwind
